

Password Policy Sample

(Policy to assist with compliance)

1.0 Overview

Passwords are an important aspect of computer security. They are the front line of protection for user accounts. A poorly chosen password may result in a compromise of LGIA Super's entire network. As such, all LGIA Super employees (including contractors and vendors with access to LGIA Super systems) are responsible for taking the appropriate steps, as outlined below, to select and secure their password.

2.0 Purpose

The purpose of this policy is to establish a standard for the creation of strong passwords, the protection of those passwords, and the frequency of change.

3.0 Scope

The scope of this policy includes all personnel who have or are responsible for an account (or any form of access that supports or requires a password) on any system that resides at any LGIA Super facility, has access to the LGIA Super network and/or corporate network, or locations and any non-public LGIA Super.

4.0 Policy 4.1 General

- All systems-level passwords (e.g., root, enable, network administrator, application administration accounts, etc.) must be changed at least every 90 days.
- All production system-level passwords must be part of the Information Security administrated global password management database.
- All user-level passwords (e.g., email, web, desktop computer, etc.) must be changed at least every 90 days and cannot be reused the past 10 passwords.
- User accounts with access to LGIA Super privileges must have a unique password from all other accounts held by that user.
- Passwords must not be inserted into email messages or other forms of electronic communication.
- All user-level, system-level, and LGIA Super access level passwords must conform to the guidelines described below.

4.2 Guidelines

Password Construction Requirements

- i. Be a minimum length of 10 characters includes one numeric and special character, and non-dictionary words on all systems.
- ii. Not be a dictionary word or proper name.
- iii. Account Lockout Duration – 240mins
- iv. Account lockout threshold - 10 invalid logon attempts
- v. Do not share passwords
- vi. Not be the same as the User ID. iv. Expire within a maximum of 100 calendar days, and a minimum password age of 50 days.
- v. Not be identical to the previous ten (10) passwords.

- vi. Not be transmitted in the clear or plaintext outside the secure location.
- vii. Not be displayed when entered.
- viii. Ensure passwords are only reset for authorized user.

4.3 Password Deletion

All passwords that are no longer needed must be deleted or disabled immediately. This includes, but is not limited to, the following:

- When a user retires, quits, is reassigned, released, dismissed, etc.
- Default passwords shall be changed immediately on all equipment.
- Contractor accounts, when no longer needed to perform their duties.

When a password is no longer needed, the following procedures should be followed *(See User Account Access Validation Policy for additional information/requirements)*:

- Employee should notify his or her immediate supervisor.
- Contractor should inform his or her point-of-contact (POC).
- Supervisor or POC should fill out a password deletion form and send it to Abdul Waseem.
- Abdul Waseem will then delete the user's password and delete or suspend the user's account.
- A second individual from that department will check to ensure that the password has been deleted and user account was deleted or suspended.
- The password deletion form will be filed in a secure filing system.

4.4 Password Protection Standards

Do not use your User ID as your password. Do not share LGIA Super passwords with anyone, including administrative assistants or secretaries. All passwords are to be treated as sensitive, Confidential LGIA Super information.

Here is a list of "do not's"

- Don't reveal a password over the phone to anyone
- Don't reveal a password in an mail message
- Don't reveal a password to the boss
- Don't talk about a password in front of others
- Don't hint at the format of a password (e.g., "my family name")
- Don't reveal a password on questionnaires or security forms
- Don't share a password with family members
- Don't reveal a password to a co-worker while on vacation
- Don't use the "Remember Password" feature of applications
- Don't write passwords down and store them anywhere in your office.
- Don't store passwords in a file on ANY computer system unencrypted.

If someone demands a password, refer them to this document or have them call Abdul Waseem.

If an account or password is suspected to have been compromised, report the incident to Abdul Waseem and change all passwords.

Password cracking or guessing may be performed on a periodic or random basis by the MSP or LGIA Super's Security Department. If a password is guessed or cracked during one of these scans, the user will be required to change it.

4.5 Application Development Standards

Application developers must ensure their programs contain the following security precautions:

- Should support authentication of individual users, not groups.
- Should not store passwords in clear text or in any easily reversible form.
- Should provide some sort of role management, such that one user can take over the function of another without having to know the other's password.
- Should support Terminal Access Controller Access Control System+ (TACACS+), Remote Authentication Dial-In User Service (RADIUS), and/or X.509 with Lightweight Directory Access Protocol (LDAP) security retrieval, wherever possible.

4.6 Remote Access Users

Access to the LGIA Super networks via remote access is to be controlled by using either a Virtual Private Network (in which a password and user id are required) or a form of advanced authentication (i.e., Biometrics, Tokens, Public Key Infrastructure (PKI), Certificates, etc.).

5.0 Penalties

Any employee found to have violated this policy may be subject to disciplinary action, up to and including termination of employment.
